- NOTES:**
- For purposes of this chart, crops with seeds such as tomato, cucumber, ochro, pumpkin, melongene and peppers, though technically fruits, are included since they are generally considered as vegetables.
 - Sweet potato and cassava rank among the world's 7 most important food crops, along with wheat, rice, maize, potato and barley.
 - There are many varieties of some crops such as hot peppers, basil, and mint. Only the most common are shown.
 - Only the more commonly grown crops are included in this chart. Therefore those such as lima beans, black eye, mung bean/bean sprouts and urdi are excluded.
